Important Notice: *For your own safety, use materials with flash point higher than 55 ° C. Any product with a lower flash point is considered to be dangerous for consumer use in accordance with european standards.*

Instructions of Use: *Carefully squirt lighter fluid all over the charcoal and let it soak before igniting it. The firelighter must have fully burned away before food is placed on the barbeque. The coals must be covered with an ash layer. A chimney is required when using the grill indoor. Keep small children away from the grill. WARNING! Do not use spirits or petrol to ignite or reignite the barbeque! CAUTION! Never squirt lighter fluid onto flaming or hot coals.*
